Daily Summary

1. Current total waste = four 20-yard bins

2. Recovery: Tank one is empty but still contains residual sludge due to incline. This will be disposed of and the tank sent back. Tank 2 was emptied today. Tank 3 was not full. The gauge read fuel 749 gal., water 5429 gal.

Total Volume of Fuel Collected: NOTE: these are approximate figures and are subject to change. Total fuel volume was determined using manual tank gauging in the field with fuel-finding paste when the tanks are full. The frac tanks are positioned on an approximate one-foot incline, which may distort the calculated total volume. More accurate figures will be determined at the point of disposal.
