Ms. Cannady;

Here is a synopsis of John's findings with Logistec, and Logistec's actions:

- 1) Logistec is now watering roads and the entrance/exit area to minimize dust leaving the site.
- 2) Logistec has been installed a tarp over fence along the property line between the buildings to minimize wind and any particulate matter leaving the property.
- 3) Logistec is applying water at the point where product is transferred or dropped into trucks.
- 4) John has re-iterated with David Proctor to the importance of minimizing dust creation throughout the facility.
- 5) As you are aware, communications directly between the facility and neighborhood citizens/concerns has been initiated and is on-going.

We are hopeful these actions will minimize any impacts to surrounding neighbors. Let us know if you have any further questions.

*Memo:*

Pictures attached are one of the warehouse I was told Port was not using, as you see they are loading a truck with small conveyor belt not covered, which I was told all conveyor belts had covers. Also on CD's you will find pictures and video of dust problems. A small bag of item in the air is also enclosed, I was told this was pollen.

Thank you for your help

*S. Cannady*
